Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Discussed proposed claim amendments and possible rejoinder of process claims in view of the allowable product claims. The examiner requested clarification on the term "cellular cytotoxicity" and the ability of the claimed antigen-binding fragments to mediate "cellular cytotoxicity", particularly complement activation and antibody dependent cellular cytotoxicity as claims to antigen-binding fragments, which lack the Fc region of the antibody responsible for mediating complement activation and antibody dependent cellular cytotoxicity raise an enablement issue under the first paragraph of 35 U.S.C. 112. Further, it was noted that antigen-binding fragments would not be produced by the claimed hybridoma (PTA-4621) as claimed, but could be produced from the isolated antibody produced by the hybridoma PTA-4621.
